6	5	4	3	2	1				6	5	4	3	2	1			
5	4	3	2	1					5	4	3	2	1				

Note: On the diagram to the right, you can see that each set was the same with the exception of the rectangle at the top, which was either ahead of the numbers or behind the numbers. The purpose of this rectangle was to show the normal waterline level (division between the upper hull grey and the lower hull dark grey paint). In practice the rectangle was sometimes slightly above, or slightly below, the division between the grey.
